## **Sample of Content:**

Can I use VISIFIRM® with acne medications? In general, it is ok to use VISIFIRM® with acne medications. As with all medications, we recommend consulting your doctor before combining. See the above discussion and know that systemic acne medications have a long list of possible side effects and these need to be discussed in detail with your doctor. While many products promise to "cure" your acne, they usually don't achieve the results you're hoping for.

The skin can be super sensitive to light while on

some medications. Oral medications that increase the risk of sunburn should be avoided while in a course of ClearLight™ treatments - tetracycline, minocycline, doxycycline and Accutane are all included in this group. The skin can be super sensitive to light while on some medications. Oral medications that increase the risk of sunburn should be avoided while in a course of ClearLight™ treatments - tetracycline, minocycline, doxycycline and Accutane are all included in this group. What are the risks? See the above discussion and know that systemic acne medications have a long list of possible side effects and these need to be discussed in detail with your doctor. No, you don't have to stop oral antibiotics or topical agents if you still have acne lesions on top of previous scars. However, for the semi-ablative procedures for severe acne scars you will need to stop the use of any retinA or glycolic products during the entire healing process. Look for "noncomedogenic" cosmetics and toiletries. These products have been formulated so that they will not cause acne. Can I use BeYouthFull with other acne medications? In general, it is ok to use BeYouthFull with other acne medications. As with all medications, we strongly recommend consulting your doctor before combining. No, you don't have to stop oral antibiotics or topical agents if you still have acne lesions on top of previous scars. However, for the semi-ablative procedures for severe acne scars you will need to stop the use of any retinA or glycolic products during the entire healing process. How long do prescribed medications for acne take to work and how long do I need to take them? Each medication works differently and therefore your doctor is the best person to tell you what to expect. They will also monitor your progress. It is important to follow the medication instructions carefully and finish each course. A worsening of acne soon after the introduction of a new medication is not uncommon so don't give up. You should expect some improvement within 8-12 weeks. I was researching acne medications via the internet and came across your website. I am a 32-year-old African-American female who has tried many medications that supposedly treat/cure acne, but none have helped. I have heard that not all treatments work for all skin types. Does your medication clear acne for African American skin type? Sincerely, Tracey Exposure to sunlight may produce side effects such as increased sensitivity or an increased risk of sunburn, irritation, or dryness, to patients taking many oral or topical acne or other medications. Why not use over-the-counter acne medications? Despite the fact that many products claim to cure acne, there is no cure for acne. You probably have been disappointed by less than acceptable results from these so-called cures. You cannot cure acne, you can only control it. Retin-A Micro has been proven to help successfully control your acne and significantly improve your skin's appearance. The acne medications used in AcneRecovery can cause side effects like that. But, those symptoms are generally dose-dependent. That means that the higher the concentration of the medication, the more likely it is to cause the side effect. Because AcneRecovery is adjustable, you are able to decrease the concentration of the dose you are using. There are a multitude of treatment options available for acne.
